Future Work

- Physics Chart Checks
  - Catch delivery or dosimetric outliers
  - Connect this data to actual delivery parameters in Record and Verify
  - Quantitatively recommend which treatment imaging modality is needed

- Toxicity/Chemo/Surgical Correlations
  - Will work with clinical database to connect this data to planning data
  - With the power of automation, let the computer find the DVH endpoint with strongest correlation to toxicity

- Better IMRT optimization using historical data
  - Will feed this data into our TPS to explore the efficacy of using historical data
